Numerical modeling of seismic airguns and low-pressure sources Leighton M. Watson, Eric M. Dunham, and Shuki Ronen SUMMARY There is significant interest in understanding the dynamics of seismic airguns and the coupling between the bubble produced when the airgun discharges and the pressure waves excited in the water.

The state of the art in numerical modeling of steel buildings has been presented, from the point of view of the practicing structural engineer designing such structures in seismic regions. Conceptual design, numerical modeling, structural analysis, and design checks have been discussed, but emphasis has been directed toward modeling, as the ...

which governs seismic wave propagation outside of seismic source regions. Generating solutions to (3.8) or (3.9) for realistic Earth models is an important part of seismology; such solutions provide the predicted ground motion at specific locations at some distance from the source and are commonly termed synthetic seismograms.

Numerical modeling can be used to model problems in different fields of geology at various scales, such as engineering geology, geophysics, geomechanics, geodynamics, rock mechanics, and hydrogeology. The following are some examples of applications of numerical modeling in geology.
